Connect is a fun brainteaser that can be a challenge for everyone.

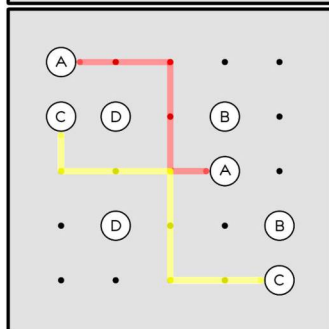

The aim of the game is to connect the same spheres by drawing lines from one sphere to the other.

In the example we use ABC spheres, but these can also be numbers or objects.

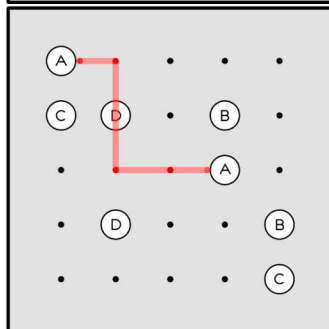

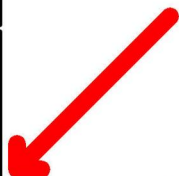

The puzzles go from easy - level 1 to very difficult - level 5

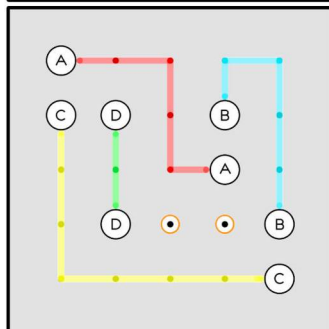

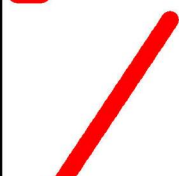

If you draw a line between the spheres with the A in them, for example, you may not extend the line diagonally. You have to use the grid in the puzzle.

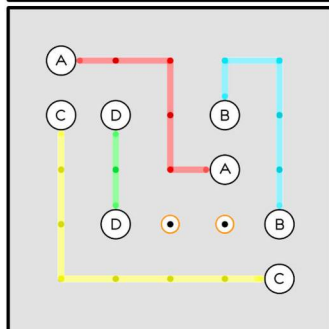

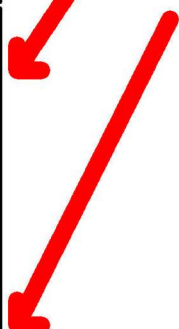

Also, two lines may not touch the same dots in the grid.

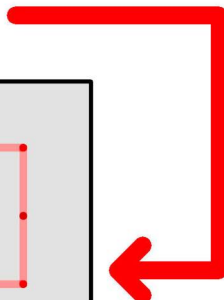

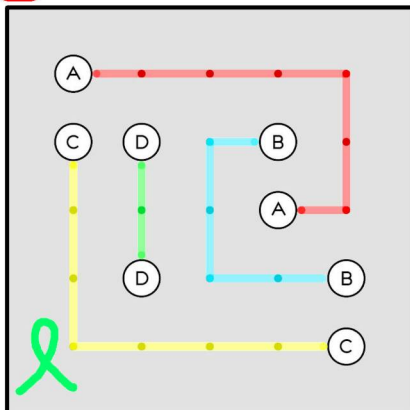

The line may also not pass over another sphere with another letter or object.

And if you have solved the puzzle, but there are dots left in the puzzle, then it has not been solved properly.

Only when all the dots have been used, and there are no diagonal (slanting) lines, no overlapping over another circle and no more dots left, will the puzzle be properly solved.
